

The ISEA Standard Headform

The ISEA standard headform (size 7) is specified in ANSI Z89.1:2003 for use in the shock absorption test for industrial safety helmets. INSPEC International Ltd has been licensed by ISEA to produce this headform from the original ISEA moulding tool.

The headform is made from cast aluminium alloy and incorporates a 19cm diameter circular flange at its flat base, to facilitate mounting. Holes (either plain or threaded) can be provided in the flange, to enable the headform to be bolted down. This option should be specified when placing an order.

The standard surface finish is a light shot blast. The overall dimensions (including base flange) are approximately 24cm high x 19cm x 19cm. The weight is 3.5kg.

Delivery: Approximately 4 weeks from receipt of order.

Effective: January 2008
