HELMET RETENTION SYSTEM TEST EQUIPMENT

We supply a wide range of equipment, designed to satisfy all of the European standards and many of the American and Australian ones.

These include dynamic strength, elongation and effectiveness (roll-off) tests.

The picture illustrates only one of them.

Rather than try to list them all here, we ask you please to contact us with your specific requirements and we will send you the relevant details.

We can provide you with a bespoke system, including suitable instrumentation (where required by the standard), to suit your needs.

Just let us know the standard(s) – number, title and clauses – that interest you, and we'll do the rest.

Effective: January 2008
